DOCUMENT 01

Project Overview

Introduction, objectives, scope, technology stack, and application structure

Project: Olympic Sports Performance Analysis

Application: Python Flask web application | **Deployment:** Render

1. Introduction

Olympic Sports Performance Analysis is a web-based project intended to present Olympic-related information in an organised and accessible way. The project focuses on exploring areas such as athlete participation, sports performance, medal achievements, and comparisons across countries.

The application provides a simple website interface through which visitors can learn about the project and navigate to dashboard and story sections.

2. Objectives

- Create a user-friendly website for an Olympic sports analytics project.
- Provide a central place to introduce the purpose and scope of the analysis.
- Offer dedicated pages for an interactive dashboard and a Tableau story.
- Present sports-related information in a clear visual format once the final data views are connected.
- Deploy the Flask application online so that it can be accessed through a web browser.

3. Project Scope

The intended analytical scope includes Olympic medal achievements, athlete participation, sports performance, and country-level comparisons. The exact indicators and time period depend on the dataset selected for the final analysis.

The current supplied project package contains the Flask application, HTML templates, CSS, JavaScript, and static image assets. It does not contain a raw Olympic dataset or a completed Tableau workbook.

4. Technology Stack

Technology	Purpose
Python	Main programming language used by the web application.
Flask	Python web framework used to define routes and render pages.
HTML	Structure and content of the website pages.

Technology	Purpose
CSS	Styling, layout, colours, and responsive presentation.
JavaScript	Client-side interactions and website behaviour.
Tableau Embedding API	Intended method for embedding published Tableau views.
Render	Cloud platform used to host the Flask application.

5. Application Structure

- **Home (/):** Renders the main Olympic Analytics landing page using templates/index_flask_ready.html.
- **Dashboard (/dashboard):** Renders templates/dashboard.html, which is prepared to display a published Tableau dashboard.
- **Story (/story):** Renders templates/story.html, which is prepared to display a published Tableau story.
- **Static assets:** CSS, JavaScript, and image resources are stored under static/assets/.

6. Expected Users and Benefits

The intended users include students, teachers, sports enthusiasts, and anyone interested in exploring Olympic data. The website can make data exploration easier by bringing project information and visual analytics into one interface.

Documentation note: This document describes the project files supplied for review. The supplied ZIP does not include the source Olympic dataset or completed Tableau workbook. Therefore, no medal totals, rankings, chart values, or statistical findings are invented here. Update the relevant sections after connecting the final dataset and publishing the Tableau views.
